Schoeller Allibert

Innovating your logistics for a better world

ROPAC® Pails

As part of Schoeller Allibert Group, our company is based in Romont since 1968. The plant in Switzerland is well known for the production of UN containers under the brand name Ropac®.

We have been awarded with a Swiss and World Star for the design of our 5 litres UN liquid pack.

The comprehensive range of ROPAC® pails are UN certified for the transportation of hazardous solid and liquid goods, they also protect the quality and integrity of high value contents.

The tough design and tamper evident sealing system protects your premises, staff and the environment from harmful leaks and spills. Ropac® pails are made from high-density polyethylene (HDPE) which increases impact resistance and guarantees performance at low temperatures.

The solid base and strong side wall of the pails ensure an exceptionally high level of stability, as well as an improved space-saving on the pallet and during transit.

For the transport of hazardous liquids the Ropac® pails of the UN liquid range are certified for class Y and Z, packing group II and III, 100 kPa with a specific density up to 2,1 kg/dm³.

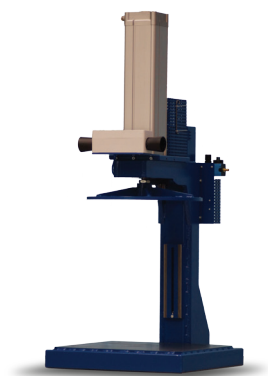

Many UV inks producers and chemical manufacturers introduced Ropac® as their standard packaging range.

Producers of high value contents from the food, pharmaceutical and vitamin industries, as well as from the printing ink, paint, coating and lubricant industries rely on Ropac®.

Our semi-automatic lidding machines are easy to integrate into your filling lines and improve productivity.

Customized solutions available such as optional flex-spout or pressure vents on lids, a large range of colours, digital printing, special palletisation or specific certifications.

Our specialists are at your disposal to reply to your enquiries.

Top benefits of the pails

1. Premium protection for high value and dangerous goods
2. Reduced packaging consumption and improved handling
3. Tamper evident security products against theft

Item number	Definition	UN certification	External diameter mm		Volume L		Height incl. lid mm
